

As an amateur radio operator, I am very concerned by the recent studies indicating the impact of BPL on amateur radio operation. Amateur radio provides an invaluable service, especially in rural areas like Kansas where storm spotter volunteers protect lives and property by using amateur frequencies to communicate with local emergency management and national weather service staff. Additionally, HF frequencies are used in disasters by multiple organizations that leverage the HAM volunteers. Please protect these valuable services by ensuring the BPL does not impact amateur frequencies.
